(54) DISPERSIBLE COMPOSITION, AND METHOD AND APPARATUS FOR FORMING IMAGE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a composition useful as various kinds of functional material and obtained by using a new macromolecular compound, and a method and an apparatus for forming an image, especially preferably, to provide an ink composition obtained by using the macromolecular compound in combination with a solvent or a dispersion medium, and a coloring matter, a toner composition, and a method and an apparatus for forming the image by using the composition.

SOLUTION: The ink composition contains the macromolecular compound having a repeating unit structure represented by general formula (1) (wherein, A is a 1-15C linear or branched alkylene group which may be substituted; m is an integer of 0-30; when m is a plural number, each A may be different; B is a single bond or an alkylene group which may be substituted; D is an aromatic ring structure which may be substituted; n is an integer of 1-10; and when n is a plural number, each D may be different), the coloring matter and the solvent.
